

--- SCREEN 1: LOGIN SCREEN ---

****Attempt 1: Initial Prompt****

"mobile app UI mockup, login screen for an app called "PantryPal".

The design must be minimalist, clean, and professional.

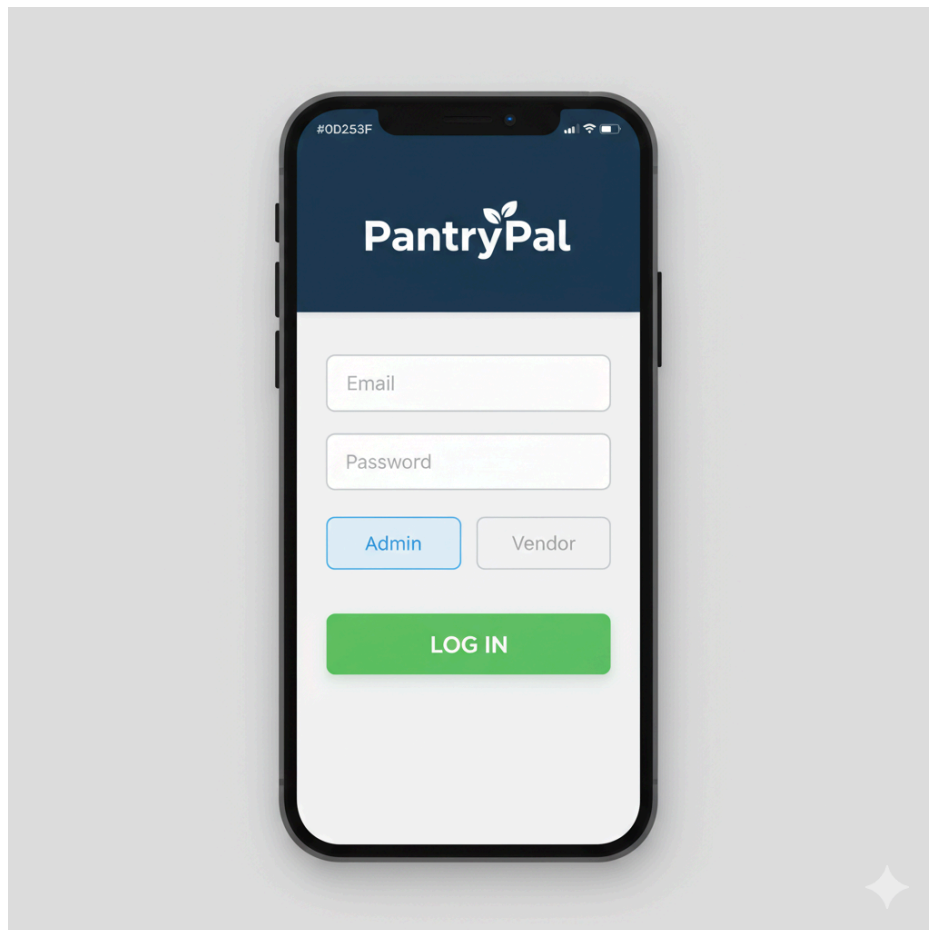

Color scheme:

- Dark blue header (#0D253F)
- White background (#F8F9FA)
- Bright green button (#1DB954)

Screen elements:

- "PantryPal" logo at the top
- Email input field
- Password input field
- A bright green login button
- Two selectable roles: "Admin" and "Vendor"

Style: high-fidelity, photorealistic, centered screen on a plain background."

****Attempt 2: Refinement Prompt****

Reason for change: The first version didn't have a clear way to select the user role. I wanted to make the login choice more obvious with two distinct buttons.

My Refined Prompt:

"Refine the previous mobile app login screen for "PantryPal".

Keep the same professional style and colors (dark blue, white, bright green).

Improve the role selection:

- REMOVE the old "Admin" and "Vendor" selectors.
- ADD two large, clean, separate buttons for the roles. One button says "Admin Login", the other says "Vendor Login".

Everything else (logo, email, password fields) should remain the same. High-fidelity UI mockup."
