## --- SCREEN 3: LOG CONSUMPTION FORM ---

My Prompt:
"mobile app UI mockup, "Log Consumption" screen for the PantryPal admin app.

Use the same professional style and colors: dark blue header (#0D253F), white background (#F8F9FA), green button (#1DB954).

Screen elements:
- A header with a "Back" arrow and the title "Log New Consumption".
- A list of pantry items. Each item has its name on the left and a quantity selector on the right.
- The quantity selector for each item should have a number (defaulting to "0") and small plus (+) and minus (-) buttons next to it.
- List the following items:
  - Tea
  - Coffee
  - Biscuits
  - Water Bottles
- A large, green "Save Log" button at the bottom of the screen.

Style: clean, intuitive form, high-fidelity, photorealistic UI."

Attempt 2: Refinement Prompt

Reason for change: The initial form was too simple. Adding a date selector and an optional field for a visitor's name provides more robust data logging, which is crucial for generating accurate reports later.

My Refined Prompt:
"Refine the previous "Log Consumption" UI for the PantryPal app.

Keep the exact same style, colors, item list (Tea, Coffee, etc.), quantity selectors, and the "Save Log" button.

Add two new fields at the top of the form, below the header:
1. A date picker field labeled "Date" that shows today's date by default.
2. An optional text input field labeled "Visitor Name (Optional)".

This makes the logging more detailed and flexible. High-fidelity UI mockup."
